Algorithm :-

1. Start
2. Input N and assign it to digit.
3. If (digit < 0), print "Positive integer only".
4. Set count to 0.
5. Increase count by 1.
6. Set digit to digit DIV 10.
7. If (digit != 0), return to steps 5.
8. Print count.
9. If (count = 1), print "single digit number".
- ~~10. If (count =~~
10. Otherwise, if (count = 2), print "second digit number".
11. Otherwise, print "Triple digit or more number".
12. END.

Pseudo code

Begin

Let N, be input from user.

Let digit $\leftarrow$ N

If (digit < 0), then
print "positive integer only".

END If

Let count $\leftarrow$ 0

~~let count $\leftarrow$ count~~

Repeat until (digit = 0)

count $\leftarrow$ count + 1

digit $\leftarrow$ digit DIV 10

print "Number of digits are: ", count
if (count = 1), then

print "Single digit number"

ELSE IF (count = 2), then

print "Double-digit number"

ELSE

print "Triple digit or more number"

END IF

END.
